Continuation of 11. does NOT place the application in condition for allowance because: The amendment to Claim 1 introduces possible new matter issues and therefore the amendment will not be entered. In particular, the amendment of the claim to read "and other alphaglycosyl alpha, alpha trehaloses" may introduce new matter because the amendment implies that the previously claimed trehaloses are also alpha-glycosyl trehaloses, which does not appear to be the case and is also not supported by the originally filed specification. The claim as previously presented was supported by the originally filed specification.

With regard to Applicant's arguments relating to the prior art rejection, the Examiner respectfully disagrees with Applicant's position because as previously stated. Maruka teaches that the claimed saccharride derviatives of trehalose can be used in compositions comprising biologically active substances including hydrophobic non-saccharide ingredients and further teaches that the methods for incorporating the present non-reducing saccharides, relatively low reducing saccharides containing them and/or trehalose prepared from these saccharides into the above mentioned compositions include conventional methods of mixing, kneading, dissolving, melting, soaking, coating, spraying, crystallizing and solidifying (Column 14, lines 5-14) (see previously mailed office action, Page 6, Paragraph 12), therefore providing clear motivation and providing a reasonable degree of success for one of ordinary skill in the art for using any of the conventional methods for incorporating the claimed saccharide derivatives of trehalose into compositions containing hydrophobic nonsaccharide ingredients, and the primary reference of Hasegawa in view of Aga teach combining trehalose with the same hydrophobic nonsaccharide ingredients as taught by Maruta and spray drying the composition to form a stable biologically active composition. Since Maruka teaches the claimed saccharide derivative of trehalose in a powder form and teaches its use in stabilizing compositions comprising hydrophobic non-saccharide ingredients and teaches conventional methods of combining such components, and further teaches the benefits of using the claimed saccharide derivatives of trehalose in such compositions (see previously mailed office action, Pages 5 and 6, Paragraphs 11 and 12), the Examiner holds the position that one of ordinary skill in the art would have been motivated to substitute the trehalose of the primary reference with the claimed saccharide derivative of trehalose taught by Maruta in order to arrive at the claimed invention. Lastly, it is noted that Maruta teaches the claimed saccharide derivative of trehalose with 50% by weight or more of the claimed trehalose as amended in the After-Final Amendment. Therefore, the rejection on record is maintained and the amendment will not be entered for the above mentioned reasons.
